

What contributes to Physician Burnout?

Problems associated with Burnout include:

- ▶ Increased frequency of patient care mistakes
- ▶ Decreased patient adherence with treatment recommendations
- ▶ Decreased empathy
- ▶ Decreased patient satisfaction
- ▶ Increased malpractice risk
- ▶ Increased part-time physician work
- ▶ Increased physician AND staff turnover

An estimated 300 to 400 doctors take their own lives each year, and the suicide rate is more than double that of the general population

A Physician Vitality Committee has been meeting **and and** is asking all physicians to complete **and** anonymous survey about wellness and burnout. These results will guide the action plan and implementation to promote a culture of wellness and engagement and more safe, seamless, and personal care. There are resources available now including the Employee Assistance Program, outside referrals, and a healing team. Check out the physician portal today to find out more.
