Juvederm VOLUMA[®] XC

Juvederm Voluma can:

- Replenish facial fullness
- Lift sagging skin to regain youthful contours
- Restore age-related loss of volume and shape to the cheeks

The Ideal Candidate for Juvederm Voluma XC

If you are over the age of 21 and are looking for a nonsurgical and minimally invasive treatment to restore facial fullness and volume, you may be a good candidate for Juvederm Voluma. Since the treatment is FDA approved and contains a modified form of the hyaluronic acid your body makes naturally, it is considered a safe treatment for men and women.

Juvederm Voluma Results

Immediately after treatment, you can expect an increase in facial volume and fullness and a gentle lifting of sagging skin around the cheek area. Since it is normal to experience some facial swelling around the treatment area, it may take up to two weeks for you to see full results. The results from Juvederm Voluma last up to two years, and you will only require touch-up treatments after this time to maintain your youthful contours.

*Not to be combined with other offers. Mention this offer at time of visit. Offer ends 06/28/19.
Must have procedure on or before 06/28/19.
