

## Print Results from MyChart

### Print Results

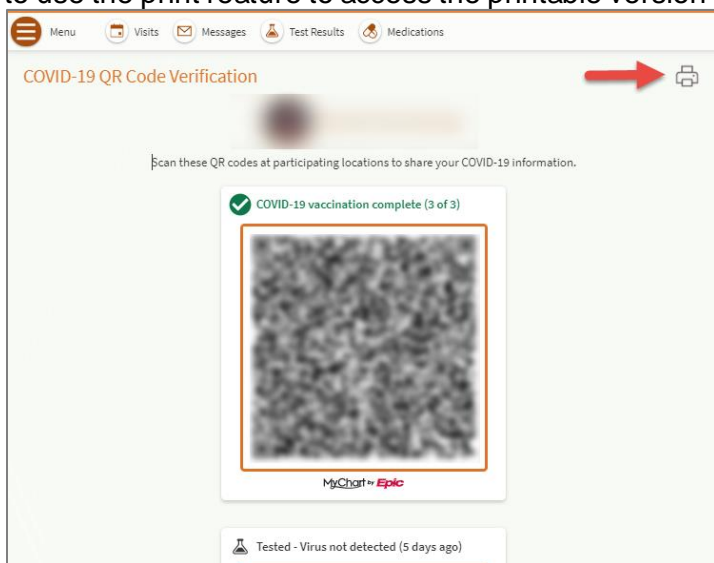

Patients can print their test results directly from the MyChart website. Patients should print using the print feature, so that the printed document has the following patient identifiers: Name, Date of Birth, & Medical Record Number.

The print feature is only available on the website and not in the mobile app.

In addition, patients can print QR codes for COVID vaccinations and/or their last COVID test result. They need to use the print feature to access the printable version that includes the patient identifiers.

QR codes are available on the website and the mobile app but are only print friendly from the website.
